

DAY-3

Resource, Resource Groups & Azure <sup>resource</sup> Manager

I want to create a VM or create a DB from Azure portal,  
the outcome is called as Resource

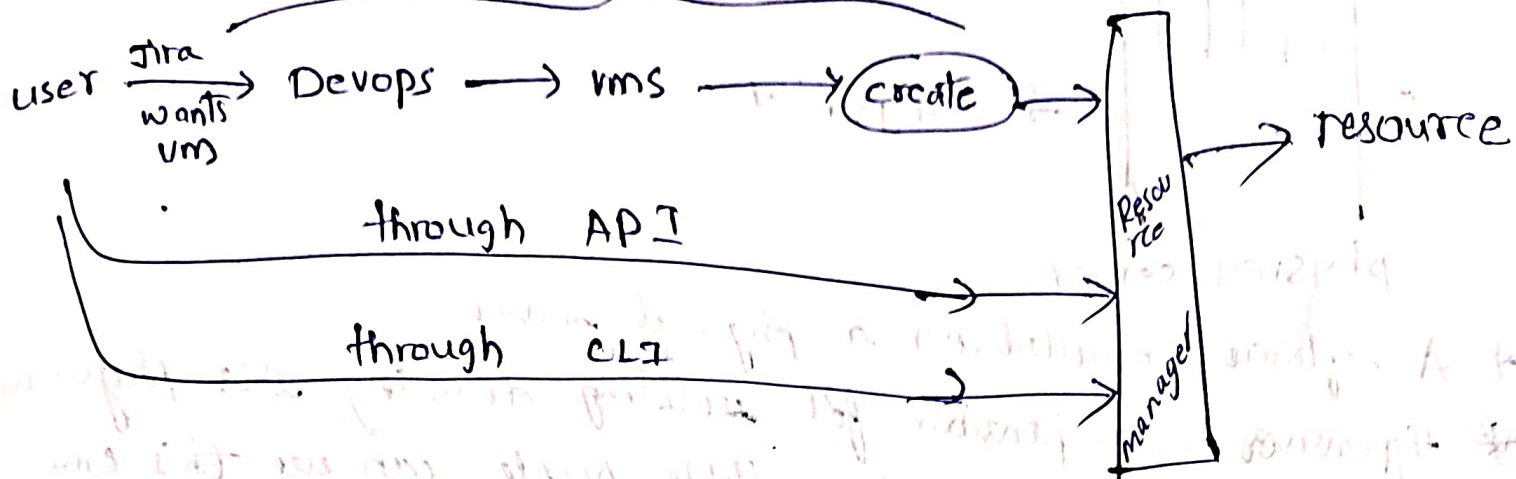

developer  $\xrightarrow[\text{requests}]{\text{VM}}$  DevOps  $\xrightarrow[\text{Azure portal}]{\text{go to create}}$  VM Resource  $\xrightarrow[\text{Back}]{\text{gives}}$  Developer

→ same DB also...

The Outcome from Azure is a resource. (An Instance of a server)

Resource manager :-

through UI

→ Azure reads all the details from create Request & passes the details to Resource manager & it creates Resource, Devops give that resource to developer/user who Requested it.

Resource Group :- (Grouping the resources)

\* without passing the value to the Resource Group, we can't create a resource in Azure.

\* Combination of resources is called Resource Group.

1) Why should we combine → It's mandatory for tracking the resources.

2) How " " " " →
